## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Yasuda (6,476,419) in view of Oh (5,694,185).

Regarding Claims 1-11, Yasuda discloses an electroluminescent display device where an organic electroluminescent device comprises a first TFT for switching; a second TFT for driving an organic EL element; and an organic EL element having an anode, a cathode, an emissive element layer interposed between both electrodes. Additionally, a first storage capacitor electrode comprising Cr and a second storage capacitor electrode also functioning as a p-Si film which is a source of the first TFT constitute a first storage capacitor via a gate insulating film while the second storage capacitor electrode and a third storage capacitor electrode formed by extending a part of a power supply line for causing the organic EL element to emit light are arranged to be opposed to each other via an interlayer insulating film to form a second storage capacitor. Yasuda fails to disclose the required contact hole structure and the capacitor electrode configuration. However, Oh discloses a matrix array of active matrix LCD and manufacturing method thereof where the required contact hole and the capacitor electrode configuration are disclosed.

Regarding Claims 12-19, Yasuda fails to disclose the method of making the semiconductor device. However, Oh discloses a matrix array of active matrix LCD and the manufacturing method thereof where the required manufacturing method is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required contact hole, capacitor electrode configuration and the method of making such device in Yasuda as taught by Oh in order to make a liquid crystal display device with better performance.
